1) Data determined in accordance with the measurement method required by law. Since 01 September 2018 all new cars are approved in accordance with the Worldwide Harmonized Light Vehicles Test Procedure (WLTP), a more realistic test procedure to measure fuel consumption and CO<sub>2</sub> emissions. You can find more information on WLTP at [www.porsche.com/wltp](http://www.porsche.com/wltp). From 01 January 2019, all fuel consumption figures are shown as determined in accordance with WLTP. CO<sub>2</sub> figures shown as NEDC-equivalent values, as CO<sub>2</sub> based taxation will continue to be based on an NEDC value (derived from WLTP) until 06 April 2020. Fuel economy and CO<sub>2</sub> emission figures are only intended as a means of comparing different types of vehicles tested under the same test cycle. New WLTP homologated vehicles are therefore not directly comparable with any vehicles tested under NEDC. For Plug-in Hybrid Electric Vehicle (PHEV) range and Equivalent All Electric Range (EAER) figures are determined with the battery fully charged, using a combination of both battery power and fuel. Values are provided for comparison only. To the extent that fuel consumption or CO<sub>2</sub> values are given as ranges, these do not relate to a single, individual car and do not constitute part of the offer. Extra features and accessories (attachments, tyre formats etc.) can change relevant vehicle parameters such as weight, rolling resistance and aerodynamics which may result in a change in fuel consumption and CO<sub>2</sub> values. Additionally, weather and traffic conditions, as well as individual driving styles, can all affect the actual fuel consumption, electricity consumption, and CO<sub>2</sub> emissions of a car.

2) Guide value determined in accordance with a partial WLTP cycle (including allowing for auxiliary equipment such as air conditioning).
